OBJECTIVE

Software Engineer with 2 years of experience in designing and developing robust and scalable systems. Eager to contribute to impactful projects with strong technical skills and problem-solving abilities.

EDUCATION

- BITS Pilani, K.K Birla Goa Campus** Aug 2018 - Dec 2022
B.E Computer Science Engineering Goa, IN

EXPERIENCE

- ICICI LOMBARD GIC** June 2023 - Present
Associate Software Engineer MUMBAI, IN
 - Migrated the Motor Insurance database** from Oracle to PostgreSQL, resulting in **Rs.20M+ annual savings** in licensing costs and improved long-term system maintainability.
 - Developed and deployed a scalable microservice to **manage policy deviation** workflows, using .NET Core and AWS ECS, enhancing flexibility in business rule handling and improving system scalability.
 - Revamped dashboards across core applications by implementing optimized queries, indexed views, and pagination, **improving data fetch performance by 30%**.
 - Reduced overall database load by 20%** by implementing **purging policies, parameterized SQL queries, and indexing strategies** across 40+ APIs and multiple database systems.
 - Led system-wide **performance improvements across 25+** microservices, including .NET upgrades (6.0 → 8.0), caching enhancements, and code-level optimizations, significantly improving response times and system stability.
 - Resolved 100+ security issues** from Checkmarx and SonarQube, **reducing vulnerability backlog by 20%**.
- Glance, Inmobi** July 2022 - December 2022
Software Development Intern Bangalore, IN
 - Developed an automated Android application testing tool for stress testing and resource consumption analysis, **reducing testing time by 30%**.
 - Enhanced troubleshooting skills by resolving complex technical issues during the development lifecycle.
- STARMARK SOFTWARE** May 2020 - July 2020
Machine Learning Intern Remote, IN
 - Designed and developed a **machine learning (ML) model to analyze logs**, enabling automated issue detection and improving system monitoring across three log streams.
 - Enhanced data quality by identifying and addressing inconsistencies, missing values, and outliers in datasets.

PROJECTS

- Samudbhav** [🔗](#): [Community Web Application] April 2025 - Present
Tools: [.Net Core, Angular, PostgreSQL, Redis, Clean Architecture] [\[GitHub\]](#)
 - Developed **Samudbhav**, a central community platform enabling membership, donations, and awareness.
 - Built **Supatham**, a learning hub with age-specific moral stories, case studies, and curated course content.
 - Created **Adrishyaa**, an e-commerce storefront promoting handmade and local products from remote communities.
 - Applied CQRS for command-query segregation, with caching and SAGA patterns for distributed workflow consistency.
- Portfolio Website** [🔗](#): [Developer portfolio with blog and newsletter] October 2024
Tools: [.NET Core MVC, Razor Pages, SMTP] [\[GitHub\]](#)
 - Developed a personal portfolio as an ASP.NET Core MVC web application, featuring a blog page and integrated newsletter system, with **50+ active subscribers**.
- Reinforcement Learning**: Improved Deep Reinforcement Learning (DRL) using transfer learning between games.
- Non-Linear Optics Research**: Conducted research on correlated photon interference and **single-photon generation**.

SKILLS

- Languages & Frameworks:** Java, C#, PL/SQL, .Net Core, SpringBoot, Angular
- Technologies & Tools:** AWS (ECS, S3, Lambda), Docker, Kafka, GitHub Actions, CI/CD
- Other Technologies & Libraries:** ReactJs, NGINX, Jenkins, Redis, REST APIs, FFmpeg, Microservices
- Research Areas:** Quantum Optics, Swarm Intelligence, Transfer Learning

HONORS AND AWARDS

- KVPY Fellowship** Dec 2017
IISC Bangalore [\[Certificate\]](#)
 - National science scholarship awarded for academic excellence and research aptitude.
