OBJECTIVE

Software Engineer with 3 years of experience in designing and developing robust and scalable systems. Eager to contribute to impactful projects with strong technical skills and problem-solving abilities.

EXPERIENCE

- **ICICI LOMBARD GIC** June 2023 - Present
Associate Software Engineer Mumbai, IN
 - Migrated the Motor Insurance database from Oracle to PostgreSQL with zero downtime, resulting in Rs.20M+ annual savings in licensing costs and improved long-term system maintainability and system stability.
 - Developed and deployed a scalable microservice to manage policy deviation workflows, using Spring Boot and AWS ECS, enhancing flexibility in business rule handling and improving system scalability.
 - Reduced overall database load by 20% by implementing purging policies, parameterized SQL queries, and indexing strategies across 40+ APIs and multiple database systems.
 - Consolidated four microservices into a single scalable and modular service by applying Clean Architecture and SOLID principles, resulting in a 12% decrease in service management overhead and enhanced maintainability.
 - Led system-wide performance improvements across 25+ microservices, including revamp of all dashboards, .NET upgrades (6.0 → 8.0), caching enhancements, improving data fetch performance by 30%.
 - Developed Policy Renewal modules and schedulers in Python & AWS, Processing 30,000+ policies daily.
- **Glance, Inmobi** July 2022 - December 2022
Software Development Intern Bangalore, IN
 - Developed an automated Android application testing tool using Java Spring Boot, for stress testing and resource consumption analysis, reducing testing time by 30%.
 - Enhanced troubleshooting skills by resolving complex technical issues during the development lifecycle.
- **STARMARK SOFTWARE** May 2020 - July 2020
Machine Learning Intern Remote, IN
 - Designed and developed a machine learning (ML) model in python to analyze logs, enabling automated issue detection and improving system monitoring across three log streams.
 - Enhanced data quality by identifying and addressing inconsistencies, missing values, and outliers in datasets.

PROJECTS

- **Samudbhav** [🔗](#): [Community Web Application Suite] April 2025 - Present
Tools: [Spring Boot, Angular & React, PostgreSQL, Redis, Clean Architecture] [\[GitHub\]](#)
 - Developed Samudbhav, a central community platform enabling membership, donations, and awareness.
 - Built Supatham, a learning hub with age-specific moral stories, case studies, and curated course content.
 - Created Adrishyaa, an e-commerce storefront promoting handmade and local products from remote communities.
 - Built using Java for B.E and Angular & React for F.E. Applied CQRS for command-query segregation, with caching and SAGA patterns for distributed workflow consistency.
- **Portfolio Website** [🔗](#): [Developer portfolio with blog and newsletter] October 2024
Tools: [.NET Core MVC, Razor Pages, Microsoft.ML, SMTP] [\[GitHub\]](#)
 - Developed a personal portfolio as an ASP.NET Core MVC web application, featuring a blog page and integrated newsletter system with integrated AI for automated summary and tag generation, with 100+ active subscribers.
- **Deep Reinforcement Learning**: Improved Deep Learning using transfer learning between games using Python.
- **Non-Linear Optics Research**: Conducted research on correlated photon interference and single-photon generation.

SKILLS

- **Languages & Frameworks:** Java, C#, PL/SQL, .Net Core, SpringBoot, Angular
- **Technologies & Tools:** AWS (ECS, S3, Lambda), Docker, Kafka, GitHub Actions, CI/CD
- **Other Technologies & Libraries:** ReactJs, NGINX, Jenkins, Redis, REST APIs, FFmpeg, ML.NET
- **Research Areas:** Quantum Optics, Swarm Intelligence, Transfer Learning

EDUCATION

- **BITS Pilani, K.K Birla Goa Campus** Aug 2018 - Dec 2022
B.E Computer Science Engineering Goa, IN

HONORS AND AWARDS

- **KVPY Fellowship** Dec 2017
IISC Bangalore [\[Certificate\]](#)
 - National science scholarship awarded for academic excellence and research aptitude.
